Plates Apart Storage Battery The plates of a storage battery must be kept apart. Otherwise current will not flow. This is the first great law of storage battery building—the weak-est point in most batteries—the strongest in the Vesta. In ordinary batteries thin wooden mats are used for this purpose. Battery acid attacks these. Finally they drop apart—the plates touch—the battery suffers from a sudden incurable paralytic shock, usually at the time you need it most. The men who build Vesta Batteries do not rely on any such makeshift to separate the plates of their battery. The plates of the Vesta batteries are locked opert with the famous, patented Vesta Indestructible Isolators. Isolators Vesta Batteries last twice as long Sales Third.
